PROFILE

- Highly focused team player with excellent interpersonal skills; adaptable and resilient under pressure.
 - Strong in modern web development, especially React (TypeScript, Hooks), Next.js, and AWS serverless architectures.
 - Proficient in designing and deploying scalable solutions with AWS Lambda, S3, API Gateway, Route 53, and Serverless Framework (IaC), including microservices and high-availability architectures.
 - Experienced in advanced DevOps practices: CI/CD, infrastructure as code, monitoring (CloudWatch), and observability.
 - Delivered full-stack solutions: asset management systems, resume builders, car collection platforms, and production GraphQL APIs, with a focus on code quality, automated testing, and maintainability.
-

KEY SKILLS

Languages

- JavaScript (React.JS, Next.js, NodeJS, TypeScript)
- GraphQL, REST APIs
- SQL/T-SQL
- HTML / CSS
- Python
- C#/.NET (Blazor)
- Automated testing (Jest, React Testing Library, NUnit)

Technical Tools

- AWS Serverless (Lambda, API Gateway, S3, Route 53)
 - Serverless Framework (IaC)
 - Git/Git CLI, GitHub Actions (CI/CD)
 - AWS CLI, CloudWatch (monitoring, alerting)
 - Docker, Microsoft Azure
 - Observability tools (CloudWatch Logs, X-Ray)
-

EXPERIENCE

Aug 2023 – Present

Web Developer / Full Stack Developer, SSY

At SSY, I contributed to the development and enhancement of SSY Navigator—Simpson Spence Young's proprietary maritime analytics and broker support platform. Navigator delivers real-time and historical market intelligence and support across dry bulk, tanker, gas, and chemical markets. The platform aggregates AIS, broker reports, and proprietary indices, integrating with third-party analytics (Signal Ocean, Baltic, Zuma, LSEG, S&P) to provide actionable insights for chartering, deal structuring, and risk assessment. I worked on custom dashboards, the Research & Intelligence modules, and security-first features, supporting brokers, traders and clients with validated, real-time sector-specific intelligence.

Key achievements:

- Operated and enhanced SSY Navigator, supporting real-time broker decision-making with custom dashboards, vessel tracking, and freight indexing tools, serving thousands of users across multiple business units.
- Delivered microprojects including supporting an Angular-based Excel Online add-in and a high-performance, multi-AZ, highly available microservice-based PDF rendering utility, saving a substantial subscription cost for the department.

- Played a major role in two successful product rebrands, collaborating across teams to deliver refreshed user experiences and updated technical solutions on schedule.
- Mentored and trained new and existing team members, providing technical guidance and fostering a culture of continuous improvement.

Aug 2021 – Aug 2023

Data Services Engineer, MasterControl

My role involved working closely with customers to integrate their systems with the MasterControl ecosystem. I also worked on strategic internal development projects to accelerate productivity within the team, primarily involving automation of manual tasks.

Key achievements:

- Led customer migrations: extracting, transforming, and loading data into MasterControl, successfully migrating over 20 enterprise clients with zero critical incidents.
 - Delivered end-of-license data extractions for customers, automating processes to significantly reduce manual effort, with some extractions handling multi-terabyte datasets.
 - Utilized T-SQL, Node.js, Java, .NET, and Python for various tasks, including building ETL pipelines and data validation tools.
 - Extensive usage of AWS services: S3, Lambda, RDS, EC2, through CLI, Terraform, SDKs, and the console, implementing monitoring and alerting for critical workflows.
 - Identified and resolved complex data integration issues, improving data accuracy and customer satisfaction.
-

EDUCATION

BSc Hons: Computer Science, University of Portsmouth (2018–2021) – First Class Honours.

A-Levels, Alton College (2016–2018): English Language, Geography, History.

GCSEs, Seaford College (2012–2016): 8 GCSEs A*-C including English, Maths, and Science.

OTHER SKILLS

Automation (Ansible, Terraform), ETL/data engineering, cybersecurity best practices, technical documentation, requirements analysis, stakeholder communication, agile methodologies, rapid application development (RAD), mentoring, workload delegation, leadership, and continuous learning.

HOBBIES

Enjoy track days, horse riding, staying active outdoors, travel and exploring new places with friends.

LOCATION

Based in South West London. Open to national and international relocation.
